4. embellishment on flower	
5. center	

Fun Flower (55334)

Shape design ©1990-2011 by AccuQuilt.

When printing this template, set page scaling to None.

Applique shape preparation

If using fusible web attach the fusible web to the wrong side of fabric before cutting out. Follow manufacturer's instructions to apply.

Cut out shape using template provided or cut out using your Accuquilt GO!™

If using acid free glue stick rub a light coating of glue on the background fabric inside the placement line.

Stitching the Applique

Every file will stitch a placement line first. This shows you where to place your cutout or your piece of fabric.

If using a piece of fabric you will trim the fabric once your tack down stitch has finished stitching.

If using a cut out shape fit the appliqué exactly inside or on top of placement lines.

The designs may be stitched in one thread color, but there are stops to allow for thread color changes for each appliqué shape and each embellishment.

Placement stitches will not show at all through a satin stitch but may be seen through an appliqué or other decorative stitch.

Be sure to place shapes in the order of stitching so that any shapes that overlap will stitch correctly.

The thread colors used here are only for illustration. Feel free to use colors that are pleasing to you.

Using the Accuquilt GO!™ Cutter makes this a project easy to do.

The AccuQuilt GO!™ dies and GO! Fabric Cutter must be purchased separately.
